

VIVA/ORAL Questions

1. *What is the difference between UI and UX design?*

⇒ UI vs UX
UI is the visual design of a product, such as colours, buttons, and layout.
UX is the overall user experience, including usability and ease of navigation.

2. *Explain the concept of responsive design.*

⇒ Responsive design
Responsive design makes a website adjust properly to different screen sizes like mobile, tablet, and desktop.

3. *What are some common web design principles you adhere to?*

⇒ Common web design principles
I follow simplicity, consistency, clear navigation, readability, accessibility, responsiveness, and fast loading.

4. *What is the difference between a block-level element and an inline element?*

⇒ Block-level vs inline element
A block-level element starts on a new line and takes full width. An inline element stays in the same line and takes only the required width.

5. *Explain the concept of CSS specificity.*

⇒ CSS specificity
CSS specificity decides which style rule is applied when multiple rules target the same element. Inline styles have higher priority than IDs, classes, and elements.

6. *What is the box model in CSS, and what are its components?*

⇒ CSS box model
The CSS box model consists of content, padding, border, and margin.

7. *What is JavaScript, and what is it used for?*

⇒ JavaScript

JavaScript is a programming language used to add interactivity and dynamic behaviour to websites.

8. *Explain the difference between synchronous and asynchronous code execution.*

⇒ Synchronous vs asynchronous

Synchronous code runs one task at a time. Asynchronous code can continue running while waiting for another task to finish.

9. *What is the DOM, and how do you interact with it using JavaScript?*

⇒ DOM

The DOM represents an HTML page as objects. JavaScript can use methods like `getElementById()` or `querySelector()` to change page content and styles.

10. *What is your experience with popular web development frameworks like React, Angular, or Vue.js?*

⇒ React, Angular, or Vue experience

I have basic knowledge of front-end frameworks and understand components, state, routing, and reusable UI development.

11. *What is the purpose of a version control system like Git, and how do you use it?*

⇒ Purpose of Git

Git tracks code changes, supports teamwork, and allows version control. I use commands like `git add`, `git commit`, `git pull`, and `git push`.

12. *What tools or techniques do you use for debugging and testing your web applications?*

⇒ Debugging and testing tools

I use browser developer tools, console logs, breakpoints, network inspection, unit tests, and tools like JUnit or PHPUnit depending on the project.
